

Introduction

CSRAYZER's **Faraday Rotator Mirror**, is used for eliminating polarization induced fluctuations in fiber interferometers, Brillouin amplifier systems, fiber laser systems, fiber sensor systems, and fiber optic antenna remoting systems, with excellent optical performance index, ultra-small package size, high environmental adaptability and reliability. The state of polarization (SOP) of the reflected light is rotated 90 degrees from that of the input light. A unique property of Faraday rotator mirrors is that at any point along the fiber, the SOPs of the forward going and reflected light are always orthogonal to each other, regardless of the birefringence of the fiber.

Specification

Parameters	Unit	Values
Center Wavelength	nm	1310/1550
BandWidth	nm	15
Rotating Angle	°	90
Rotating Angle Tolerance	°	1
Insertion Loss	dB	0.7
Polarization Dependent Loss	dB	0.1
Polarization Mode Dispersion	ps	0.1
Max Optical Power	mw	500
Resistance of Water Pressure	Mpa	5-50
Operating Temperature	°C	-45+70
Storage Temperature	°C	-55+85
Package Dimension	mm	2.5x12

*IL is 0.3 dB higher, RL is 5 dB lower, and ER is 2 dB lower for each connector added.

*Above specifications are for device without connector and may change without notice.
